# Sternzeichen Arzt Achieves Success with Dashjoin's Low-Code Solution for TMS Online Platform

Sternzeichen Arzt, a leading educational platform dedicated to helping aspiring medical professionals, recently launched a cutting-edge online service for its Test für medizinische Studiengänge (TMS) product. By partnering with Dashjoin, a low-code development platform, Sternzeichen Arzt overcame technical challenges and brought their vision to life, enhancing the learning experience for students preparing for medical studies.

## The Challenge

Sternzeichen Arzt's mission is to support students in realizing their dreams of becoming doctors by providing personalized learning content, customized curricula, and fostering a strong professional community. A critical element of their service is delivering realistic performance assessments that allow students to gauge their standing relative to other candidates. This fosters motivation and self-awareness, key drivers of success in the medical field.

Jonas Gerlach, co-founder of Sternzeichen Arzt, explained: "Knowing your weaknesses and strengths motivates you to become the best you can be. Seeing improvements in your score also drives you to keep getting better. Therefore, providing an online platform for our customers was a logical next step."

However, the journey to creating this online service wasn't without hurdles. Developing a scalable and interactive platform that could continuously adapt to customer feedback seemed a daunting task, given the technical complexity involved.

# The Solution

To overcome these challenges, Sternzeichen Arzt turned to Dashjoin's low-code platform. The partnership allowed them to build their online service faster than expected while ensuring flexibility for future improvements. Dashjoin's approach not only reduced development complexity but also empowered Sternzeichen Arzt to continuously refine their offering based on user feedback.

Enes Rafel Sevgi, co-founder of Sternzeichen Arzt, emphasized how pivotal Dashjoin was in realizing their vision: "Initially, the technical hurdles seemed quite high for the project. A low-code approach, and specifically our partnership with Dashjoin, allowed us to realize our vision in record time. Tuning the product based on customer feedback is very easy. The Dashjoin team was also very helpful throughout the project."

The result was a fully integrated, user-friendly platform that helps aspiring medical students monitor their progress and improve their performance for the TMS exam. Students can now compare their scores with peers, identify areas of improvement, and feel more motivated to pursue their goals. The flexibility of Dashjoin's low-code approach has allowed Sternzeichen Arzt to remain agile, responding swiftly to user feedback and implementing enhancements seamlessly.

Sternzeichen Arzt's partnership with Dashjoin is a prime example of how innovation and collaboration can lead to remarkable success, bringing transformative solutions to life efficiently and effectively.
